

# How to use Isobuster to unzip and extract files:

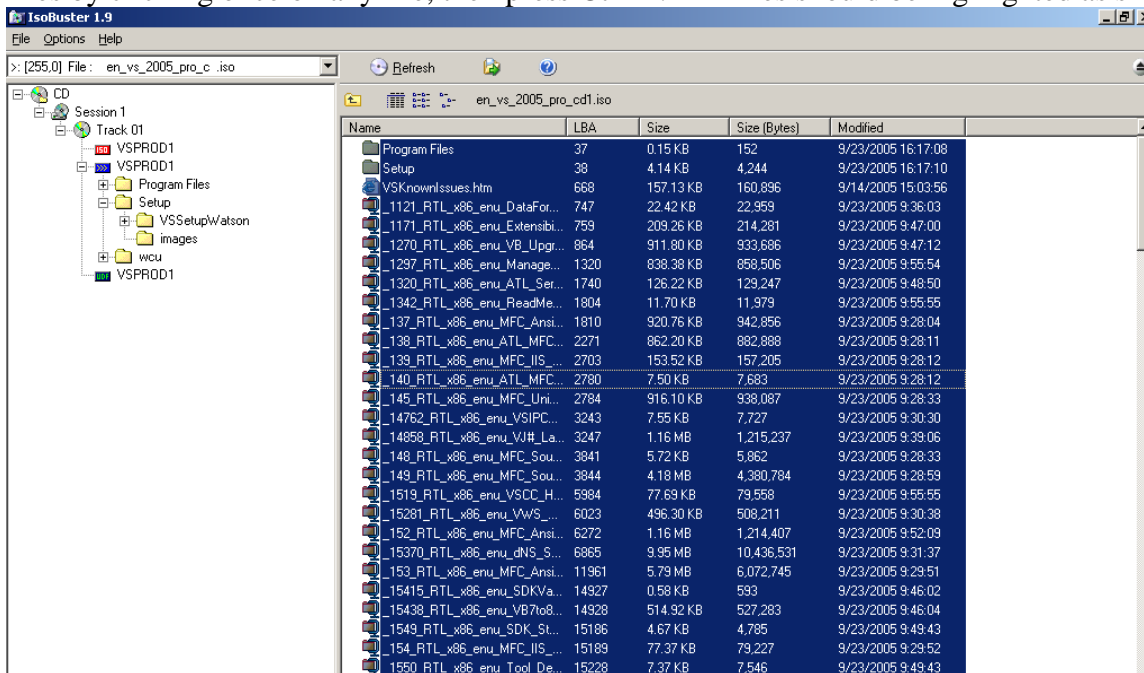

1. Open Isobuster program, go to File, Open Image File.

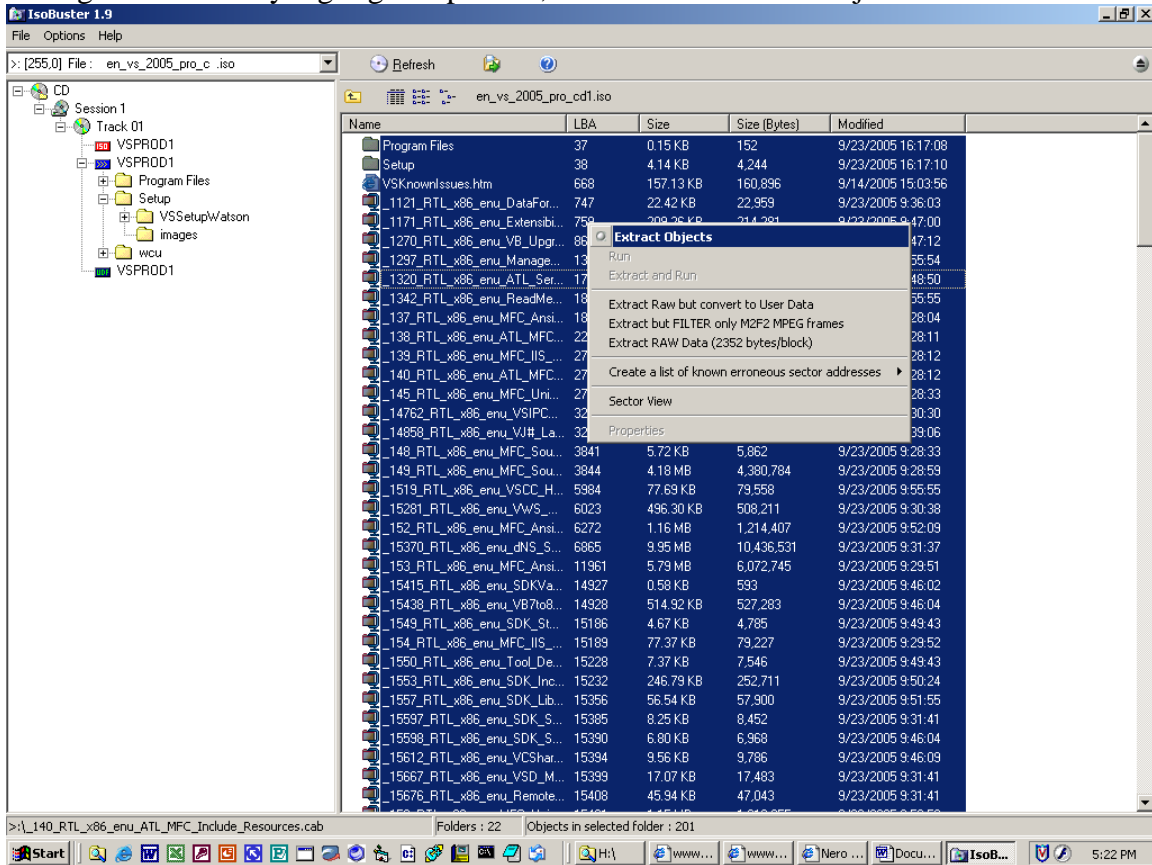

2. Go to where you saved the downloaded ISO file and click Open.

3. The ISO file will be automatically unzipped. Now you need to extract the files to your hard drive. Select all files by clicking once on any file, then press Ctrl A. All files should be highlighted as shown.

4. Right-click on any highlighted portion, then choose Extract Objects.

5. Select Destination Folder where you want the extracted files to be on your hard drive.  
**IMPORTANT:** you need to **extract each ISO file of each CD (CD 1, 2, etc.) into separate folders.**

6. After all your CDs were extracted, go to that Destination Folder and run the program by double-clicking Setup.exe. Installation of the program should start.
